ABSTRACTED-PUB-NO: US 5716602A
BASIC-ABSTRACT:

Insect repellent sunscreen composition comprises: (a) 10-40 wt.% organic sunscreen agent having absorption capability at least within the UV range of 290-400 nm; (b) 2-50 wt.% insect repellent; (c) 1-20 wt.% neopentanoate; (d) 20-60 wt.% water and (e) 0.1-15 wt.% emulsifier. Also claimed is production of the composition by mixing the components together.

The sunscreen agent comprises 2-ethylhexyl methoxycinnamate, 2-ethylhexyl salicylate, 2-ethylhexyl 2-cyano-3,3-diphenylacrylate, oxybenzone, padimate O or titanium dioxide and is preferably a mixture of 2-ethylhexyl

methoxycinnamate, 2-ethylhexyl salicylate and oxybenzone. The insect repellent comprises N,N-diethyl toluamide (DEET), N,N-diethyl benzamide, p-menthane-3,8-diol, 1-piperidinecarboxylic acid, 2-(2-hydroxyethyl)-1-methylpropylester, 1-(3-cyclohexen-1-ylcarbonyl)-2-m-ethylpiperidine, citronella oil, clove oil, coconut oil, cedar oil, geraniol, lemon grass oil, thyme oil, rosemary oil, mint oil, geranium oil or eugenol. Component (c) is an alkyl neopentanoate, preferably octyldodecyl neopentanoate. The emulsifier is an anionic emulsifier.

USE - The composition is applied to an exposed portion of a human body to act as a sunscreen and an insect repellent (claimed).

ADVANTAGE - The composition has a high sun protection factor (SPF) with improved insect repellency, even when using lower levels of repellent active ingredient than in comparable competitive products. The composition is especially useful in environments where skin is regularly exposed to water and particularly during swimming and sunbathing outdoors. The composition has good cosmetic characteristics, particularly with respect to skin softening and a non-greasy feel.
